

Dosing & Titration for Toujeo[®]

How to initiate and titrate to individualized goal¹

The starting dose of Toujeo[®] is based on prior treatment

1
START

	Insulin-naïve	Once-daily basal insulin	Twice-daily NPH
Type 1*	1/3 to 1/2 of the total daily insulin dose	1:1	
Type 2	0.2 Units/kg for Initial dose of Toujeo [®]	unit conversion to start	80% of total daily NPH dose

*As a general rule, 0.2 to 0.4 units of insulin per kilogram of body weight can be used to calculate the initial total daily insulin dose in insulin naïve patients with type 1 diabetes. Mealtime insulin should be used to satisfy the remainder of the daily insulin requirements.

Weight based dosing for insulin naïve adult T2DM patients

Weight in lb (pounds)	Starting insulin dose in Units	Weight in lb (pounds)	Starting insulin dose in Units ^a
154-164	14	242-252	22
165-175	15	253-264	23
176-186	16	264-274	24
187-197	17	275-285	25
198-208	18	286-296	26
209-219	19	297-307	27
220-230	20	308-318	28
231-241	21	319-329	29

^aUnits of Toujeo[®] are rounded down to the nearest whole unit.

2
TITRATE

- Adjust dose according to patient's FPG goal¹
- ADA recommends goals be individualized according to patient needs^b
- Titrate Toujeo[®] no more frequently than every 3 to 4 days to minimize the risk of hypoglycemia¹
- Individualize and titrate the dosage of Toujeo[®] based on the individual's metabolic needs, blood glucose monitoring results, and glycemic control goal.

^bADA glycemic recommendations for fasting or premeal plasma glucose for nonpregnant adults with diabetes: 80 - 130 mg/dL. More or less stringent goals may be appropriate for individual patients. ADA, American Diabetes Association; FPG, fasting plasma glucose

Indications and Usage for Toujeo[®]

Toujeo[®] is a long-acting human insulin analog indicated to improve glycemic control in adults with diabetes mellitus.

Limitations of Use: Toujeo[®] is not recommended for treating diabetic ketoacidosis.

Important Safety Information for Toujeo[®] (insulin glargine injection) 300 Units/mL

Contraindications

Toujeo[®] is contraindicated during episodes of hypoglycemia and in patients hypersensitive to insulin glargine or any of its excipients.

Please see additional Important Safety Information for Toujeo[®] on next page.

Please see full prescribing information from the Toujeo.com website from where you printed this information.

Important Safety Information for Toujeo[®] (insulin glargine injection 300 Units/mL) (cont'd)

Warnings and Precautions

Toujeo[®] contains the same active ingredient, insulin glargine, as Lantus[®]. The concentration of insulin glargine in Toujeo[®] is 300 units per mL.

Insulin pens and needles must never be shared between patients. Do NOT reuse needles.

Monitor blood glucose in all patients treated with insulin. Modify insulin regimens cautiously and only under medical supervision. Changes in insulin strength, manufacturer, type, or method of administration may result in the need for a change in insulin dose or an adjustment in concomitant oral antidiabetic treatment. Changes in insulin regimen may result in hyperglycemia or hypoglycemia.

Unit for unit, patients started on, or changed to, Toujeo[®] required a higher dose than patients controlled with Lantus[®]. When changing from another basal insulin to Toujeo[®], patients experienced higher average fasting plasma glucose levels in the first few weeks of therapy until titrated to their individualized fasting plasma glucose targets. Higher doses were required in titrate-to-target studies to achieve glucose control similar to Lantus[®].

Hypoglycemia is the most common adverse reaction of insulin therapy, including Toujeo[®], and may be life-threatening.

Medication errors, such as accidental mix-ups between basal insulin products and other insulins, particularly rapid-acting insulins, have been reported. Patients should be instructed to always verify the insulin label before each injection.

Do not dilute or mix Toujeo[®] with any other insulin or solution. If mixed or diluted, the solution may become cloudy, and the onset of action/time to peak effect may be altered in an unpredictable manner. Do not administer Toujeo[®] via an insulin pump or intravenously because severe hypoglycemia can occur.

Severe life-threatening, generalized allergy, including anaphylaxis, can occur. Discontinue Toujeo[®], monitor and treat if indicated.

A reduction in the Toujeo[®] dose may be required in patients with renal or hepatic impairment.

As with all insulins, Toujeo[®] use can lead to life-threatening hypokalemia. Untreated hypokalemia may cause respiratory paralysis, ventricular arrhythmia, and death. Closely monitor potassium levels in patients at risk of hypokalemia and treat if indicated.

Fluid retention, which may lead to or exacerbate heart failure, can occur with concomitant use of thiazolidinediones (TZDs) with insulin. These patients should be observed for signs and symptoms of heart failure. If heart failure occurs, dosage reduction or discontinuation of TZD must be considered.

Drug Interactions

Certain drugs may affect glucose metabolism, requiring insulin dose adjustment and close monitoring of blood glucose. The signs of hypoglycemia may be reduced in patients taking anti-adrenergic drugs (e.g., beta-blockers, clonidine, guanethidine, and reserpine).

Adverse Reactions

Adverse reactions commonly associated with Toujeo[®] include hypoglycemia, allergic reactions, injection site reactions, lipodystrophy, pruritus, rash, edema and weight gain.

Important Safety Information for Toujeo[®] SoloStar[®] and Toujeo[®] Max SoloStar[®]

Toujeo[®] SoloStar[®] and Toujeo[®] Max SoloStar[®] are disposable prefilled insulin pens. To help ensure an accurate dose each time, patients should follow all steps in the Instruction Leaflet accompanying the pen; otherwise they may not get the correct amount of insulin, which may affect their blood glucose levels. It is especially important to perform a safety test when a patient is using a new pen for the first time.

Do not withdraw Toujeo[®] from the SoloStar[®] and Max SoloStar[®] disposable prefilled pens with a syringe.
